

CLIENT · FIELD REFERENCE

Admin Field Reference

Every field in the admin console, module by module: what it does, what happens when you change it, and exactly where that change shows up on the public site.

Public site — 54.162.49.131.nip.io

Admin console — admin.54.162.49.131.nip.io

Contents & how to read this

Organised the same way the admin sidebar groups things. Each field row follows one pattern: the field, what changing it does, and where it shows up on the public site (or "—" if it's admin-only, never public).

1. Website Builder — pages, header, footer, navigation, media, SEO, templates	3
2. Countries	6
3. Subjects	9
4. Generic Courses	10
5. Universities	13
6. University Course Offerings	14
7. Scholarships	15
8. Consultants	16
9. Jobs (Careers)	17
10. Events	18
11. Success Stories	19
12. Testimonials	20
13. Shared fieldsets — Featured, Scheduled Publishing, SEO	21
14. Operations — Bulk import/export, Redirects	23
15. Settings — 7 groups	24
16. Access	26

A repeated pattern worth knowing once: almost every catalogue record (Universities, Offerings, Scholarships, Consultants, Jobs, Events, Success Stories, Testimonials) shares three identical fieldsets — **Featured Placement**, **Scheduled Publishing**, and **SEO**. Rather than repeat their fields in every section, they're documented once in Section 13 and each module's table just notes it carries them. A record must also be **Published** (a separate switch, not a field) before any of this appears publicly at all — a Draft record is invisible on the public site regardless of what its fields say.

1 Website Builder

Controls how the site is presented — page composition, global navigation, media, and search-engine metadata — as distinct from catalogue content (Section 2 onward).

1.1 Website Pages [Website Builder → Website Pages](#)

FIELD / CONTROL	WHAT IT DOES	EFFECT ON PUBLIC SITE
Page row (one per public page)	Lists every public page/template with its management type (CMS page, shared template, or code-defined route) and links to its own editor.	Navigational only — no direct effect itself.
"SEO" action per row	Opens that exact page's own SEO settings, pre-selected.	Whatever is saved there changes that page's <code><title></code> and meta description.
"Edit" / "Open in Builder" action	Opens the page's content editor (sections, if it's a CMS-managed page).	See 1.1a below.

1.1a Inside a CMS page (e.g. Home, About, FAQ)

FIELD / CONTROL	WHAT IT DOES	EFFECT ON PUBLIC SITE
Sections (add / edit / reorder)	Each section has a heading, body content, and a type (rich text, card grid, FAQ group, stats, CTA, related links).	Renders in that order on the live page, once published.
"Show on Desktop / Tablet / Mobile" (per section)	Independent visibility toggles per breakpoint.	A section can appear on desktop and be hidden on a phone, or any combination. All three off shows a warning in the editor.
Draft vs Published state	Every edit saves as a draft first.	Drafts are visible only in the admin's Preview — never on the live page — until Publish is clicked.
Preview (Desktop / Tablet / Mobile)	Renders the draft at real device widths.	Admin-only; doesn't affect the live page.
Publish	Makes the current draft the live version.	Immediately visible to visitors.
Version history → Compare / Restore	Every save is recorded. Compare shows a plain-language diff; Restore reapplies an older version.	Restore creates a <i>new</i> version and still requires Publish to go live — it never auto-publishes.
Header/Footer override (per page)	Lets one specific page use a different header or footer than the global default.	Only that page's header/footer changes; every other page keeps the global one.

1.2 Global Header & Global Footer [Website Builder → Global Header / Footer \(opens Settings\)](#)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Primary CTA label / destination	The button text and link in the header.	Appears on every public page's header, immediately after saving.

Show the header CTA	Toggles the button on/off entirely.	Hides or shows it site-wide.
Keep the header visible while scrolling	Sticky vs. scroll-away header.	Changes header behaviour on every page.
Announcement bar text / link / show toggle	An optional strip above the header.	Shows or hides above the header, every page.
Footer description	Short paragraph shown in the footer.	Every page's footer.
Copyright text	Legal line at the very bottom.	Every page's footer.
Show the contact column	Toggles the footer's contact-details block.	Every page's footer.
Show the counselling CTA / label / destination	An optional call-to-action block in the footer.	Every page's footer.
Show social links	Toggles the social-icon row.	Every page's footer.
Privacy policy URL / Terms URL (optional)	Footer legal links.	Every page's footer; hidden if left blank.
Account CTA label / destination (hidden until set)	A reserved "Create account" link.	Stays invisible on every page until a destination URL is entered — Phase 1 has no student login to send it to yet.

1.3 Navigation menus [Website Builder → Navigation menus](#)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Menu type: HEADER / FOOTER / CUSTOM	Which structural slot a menu feeds.	HEADER/FOOTER menus feed the Global Header/Footer directly.
Item link type: PAGE / CUSTOM / NONE	PAGE links to a CMS page by reference (survives that page's URL changing); CUSTOM is a raw URL; NONE makes the item a label-only group heading.	Determines where clicking that menu item goes.
Item order (drag/reorder)	Display sequence.	Left-to-right or top-to-bottom order in the live menu.
Active / Deactivate	Soft-disable a menu item without deleting it.	Deactivated items disappear from the live menu; reactivating brings them straight back.
Menu status: Publish / Unpublish	Whether the whole menu is live.	An unpublished menu falls back to nothing being rendered in that slot.

1.4 Page templates [Website Builder → Page templates](#)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
-------	--------------	-----------------------

Template layout (per detail-page type, e.g. University Detail)	One shared layout definition used by every record of that type.	Changing it changes every live page of that type at once — the individual record's own data is untouched.
Reusable sections	Content blocks that can be dropped into multiple CMS pages.	Editing a shared section updates it everywhere it's used.

1.5 Media library Website Builder → Media library

FIELD / CONTROL	WHAT IT DOES	EFFECT ON PUBLIC SITE
Upload	Adds a new image/file to the library.	Available to pick from any media selector platform-wide; has no public effect until attached to a record.
"In use" indicator	Lists every page, catalogue record, header/footer, or template currently referencing this file.	Warns before deletion so a live image can't be silently removed out from under a public page.
Delete	Removes the file.	Any live page still referencing it will show a broken image — check "in use" first.

1.6 SEO management Website Builder → SEO management

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Static-page SEO (per code-defined route: listings, comparisons, Home, FAQ, etc.)	The same SEO fieldset as catalogue records (Section 13.3), but for routes with no database record of their own.	Sets that route's title, meta description, and indexing.
"Allow search indexing" default	Comparison pages default to off (noindex) since they're generated views, not primary content.	Search engines won't index a comparison URL until an admin explicitly opts it in.

2 Countries

Public page family: [/countries](#) (listing) and each country's own destination page. The country listing currently *is* the site's homepage — the "/" route reads the same underlying content as [/countries](#).

2.1 Core (Identity, listing content, display) Countries → open a country

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Continent	Which continent this country is grouped under.	Determines the country's placement/filtering on the listing page.
Country name	Display name.	Shown as the page heading and in every listing card, link, and breadcrumb.
Slug	The URL segment. Existing slugs never change silently once set.	Directly forms the public URL.
ISO alpha-2 / alpha-3	Standard two/three-letter country codes.	Used internally for data integrity; not directly visible to a visitor.
Page heading	The heading shown on the country's own page (can differ from the plain name).	Renders as that page's main heading.
Short description	A concise summary of the country as a study destination.	Appears in listing cards and feeds the page's search-engine meta description (unless a dedicated SEO description is set — see 2.3).
Display order	Manual ordering weight.	Where this country falls in listing order relative to others.
Featured country	Marks the country for prioritised placement.	Featured countries surface first in relevant listing sections.
Publish / Unpublish	Controls visibility.	Unpublished = the country's page and listing entry both disappear entirely.

2.2 Structured profiles Country page → Profile editors

Four independently-saved profiles. Each has its own "Source URL" and "Verified at" date — the public API hides any optional fact that hasn't been verified, so an unverified field simply doesn't render rather than showing a guess.

Cost profile

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Currency code / symbol	e.g. CAD, \$	Prefixes every tuition figure shown for this country.
Tuition minimum / maximum	The typical annual tuition range.	Shown on the country page's cost section and used in filters.
Tuition period	Per year, per semester, etc.	Qualifies how the tuition figures are read.

Budget band	A coarse classification (e.g. mid-range).	Used by the "budget band" filter on the country listing.
Living cost minimum / maximum	Typical living expenses.	Shown alongside tuition on the country page.
Applicable year	Which year the figures apply to.	Shown as a caveat next to the figures.

Work profile

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Part-time allowed (yes/no)	Whether students may work part-time while studying.	Drives the "part-time work" claim in the country's description and work-rights section.
Part-time hours/week	The typical permitted limit.	Shown in the work-rights section.
Post-study work available (yes/no)	Whether graduates get post-study work rights.	Drives whether any post-study-work claim appears at all.
Post-study months min / max	The typical eligible window.	Shown alongside the post-study-work claim.
Immigration pathway strength	A qualitative rating of pathway strength.	Shown in the "why study here" section.
Visa success band / percentage	Optional visa-approval indicator.	Shown only once verified; otherwise hidden.

Language profile

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
IELTS / PTE / TOEFL / Duolingo requirement	Whether each test is required, optional, or varies.	Shown in the country's language-requirement summary.
Minimum score (per test)	The typical minimum accepted score.	Shown alongside the requirement.
Language waiver available	Whether a waiver route exists.	Shown as a note if enabled.

Statistics profile

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Universities / public universities count	Headline counts.	Shown as stat callouts on the country page.
Courses / UG courses / PG courses count	Catalogue-size counts.	Shown as stat callouts.
Top-ranked universities count	A headline number.	Shown as a stat callout.

Intakes

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Active intake selection + "Major" flag	Which of the platform's global intake seasons apply to this country.	Feeds the country page's intake summary and the offering-level intake/deadline pickers.

2.3 Editorial workspace Country page → Editorial workspace

FIELD / CONTROL	WHAT IT DOES	EFFECT ON PUBLIC SITE
Content sections (heading + typed body, reorderable)	The "why study here" narrative content, built from typed blocks rather than free HTML.	Renders in the order set, in the country page's editorial area.
FAQs (question / answer / category / featured / order)	Country-specific frequently-asked questions.	Renders as an FAQ list/accordion on the country page.
Country's own SEO record (title, meta description, canonical, focus keyword, Open Graph, Twitter card, robots index/follow, schema JSON, hreflang JSON)	A dedicated, fuller SEO record separate from the catalogue-wide SEO fieldset.	Governs this specific country page's search-engine and social-share appearance.
Consultant guidance cards (title, slug, short description, overview, icon/featured media, free-consultation flag, CTA label/URL, status, featured, order)	Optional promotional cards for consultants relevant to this country.	Shown on the country page when published; the page falls back to a neutral counselling CTA when none are published.

3 Subjects

Public page family: [/subjects](#) and each subject's own page.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name	Display name.	Page heading, listing cards, links.
Slug	URL segment. Left blank, generates from the name; the API rejects a truly empty value.	Forms the public URL.
Short description	Summary shown on listing cards.	Listing card text and default meta description.
Overview	Longer body content for the subject's own page.	Main content area of the subject page.
Icon / Listing / Hero media	Three separate image slots for different placements.	Icon in navigation/cards, listing image on the listing page, hero on the subject's own page.
Featured subject	Prioritised placement.	Surfaces first in relevant listing sections.
Display order	Manual ordering weight.	Listing order relative to other subjects.
Sub-subjects (repeatable, managed on the subject's own page)	Narrower specializations under this subject.	Feeds /subjects/{slug}/specializations .
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

4 Generic Courses

Public page family: [/courses](#) and each course's own page. "Generic" because one course record (e.g. "Bachelor of Computer Science") can be offered by many universities — see Section 6 for the university-specific offering.

4.1 Core

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Subject	Which Subject this course belongs to.	Groups the course under that subject's listing and filters.
Course level	e.g. Bachelor, Master, Diploma, PhD.	Shown as a badge/label and used in the level filter.
Sub-Subject ID (optional)	Links to a narrower specialization.	Groups the course under that specialization where set.
Course name	Display name.	Page heading, listing cards, links.
Slug	URL segment (lowercase, hyphenated). Optional — generates from the name.	Forms the public URL.
Short name / Qualification / Course code	Additional identifiers.	Qualification name shown on the course page; course code is largely for internal reference.
Short description	Summary for listing cards.	Listing card text and default meta description.
Overview	Longer body content.	Main content area of the course page.
Study modes (multi-select)	e.g. Full-time, Part-time, Online.	Shown as badges and used in the study-mode filter.
Duration min / max / unit	Typical course length.	Shown on the course page's facts panel.
Credits	Academic credit value.	Shown on the facts panel where set.
Career summary	Typical career outcomes.	Shown in the course page's career section.
Popularity score	A manual ranking signal.	Can influence default sort order on the listing.
Featured course media	Hero/listing image.	Shown on listing cards and the course page.
Featured course	Prioritised placement.	Surfaces first in relevant listing sections.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

4.2 Editorial workspace [Course page](#) → [Availability](#) / [Content](#) / [FAQs](#) / [SEO](#) / [Related](#)

Opens only after the course core is first saved.

Availability — per-country mapping (repeatable, one row per country this course is offered in)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Country	Which published country this mapping applies to.	Adds/enables a country choice on the course page (e.g. <code>"/courses/{slug}?country=canada"</code>).
Availability status: Available / Limited / Unavailable	How openly this course is offered in that country.	Shown as the availability state for that country choice.
Record status: Active / Inactive	Soft-enable/disable this specific mapping.	Inactive mappings stop appearing as a country choice.
Indicative tuition min / max, currency, period	Country-specific tuition, distinct from any university-specific offering's own tuition.	Shown on the country-choice card and the course-country facts panel.
Application fee min / max	Typical application cost.	Shown on the facts panel.
Duration min / max / unit overrides	Country-specific duration, if it differs from the course's own default.	Overrides the default duration for that country's facts panel.
Academic minimum % / CGPA	Typical entry requirement.	Shown in the entry-requirements section for that country.
IELTS / PTE / TOEFL / Duolingo minimum	Typical language-test requirement.	Shown alongside the academic requirement.
Work experience (months)	Typical required prior experience.	Shown in entry requirements where set.
Scholarship available (yes/no)	Whether scholarships are typically available for this course/country pairing.	Shown as a badge on the country-choice card.
Admission / English requirements, application notes, career opportunities	Free-text detail for that country.	Shown in the course page's per-country detail sections.
Source URL / Verified date	Required before this mapping is treated as trustworthy.	An unverified "Available"/"Limited" mapping is flagged for review rather than shown as confirmed.
Featured mapping	Prioritises this country choice.	Surfaces first among the course's country choices.
Intakes + deadlines (per mapping)	Which intake seasons apply, with an optional deadline date each.	Shown in the course-country intake/deadline summary.

Content — typed sections (repeatable)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
-------	--------------	-----------------------

Section key: curriculum, skills, admission-requirements, documents, career-outcomes, application-process, source-trust, counselling-cta	Which named slot this content fills.	Each key renders in its designated place on the course page.
Section type: Rich text, Fact grid, Card grid, Steps, Checklist, CTA, Media	How the content is laid out.	Changes the visual presentation of that section.
Heading / Subheading	Section title text.	Rendered as that section's heading.
Structured body (typed content, not raw HTML)	The section's actual content.	Rendered inside the section per its type.
Media (optional)	An image for a Media-type section.	Rendered inside that section.
Display order / Status	Sequencing and active/inactive.	Order of sections on the page; inactive sections don't render.

FAQs, SEO, Related courses

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
FAQ question / answer / order / status	Course-specific FAQs.	Renders as an FAQ list on the course page.
SEO (title, description, canonical, focus keyword, OG, Twitter, robots)	Same fieldset as Section 13.3, dedicated to this course.	This course page's search/social appearance.
Related courses (selected from the catalogue)	Manually curated "you might also like" list.	Shown in the course page's related-courses section.

5 Universities

Public page family: `/universities` and each university's own page, plus its courses sub-pages.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name / Slug / Short summary / Display order	Core identity fields (shared "Core" pattern, Section 13.1).	Page heading, URL, listing card summary, listing order.
Country	Which country this university belongs to.	Groups the university under that country's listing and filters.
Institution type	e.g. public, private.	Shown as a fact on the university page.
Source URL	Reference for verification.	Not shown directly to visitors; supports data trust internally.
Media	Hero/listing image.	Listing card and university page.
Description	Overview text.	Main content area of the university page.
Campuses (repeatable: name, city, state, address)	One or more physical locations.	Shown in the university page's campus/location section.
Accreditations (repeatable: name, accreditor, reference URL)	Recognitions held by the institution.	Shown in the university page's accreditation section.
Featured Placement, Scheduled Publishing, SEO	Shared fieldsets — see Section 13. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site, including its offerings.
Claim requests	Institutions can request to claim/verify their own listing.	Approving a claim is an admin action; has no automatic public effect until acted on.

6 University Course Offerings

The specific pairing of one university with one generic course — this is what actually carries tuition, intake, and entry-requirement detail for that combination. Public page:

`/universities/{university}/courses/{offering}` .

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name / Slug / Short summary / Display order	Core identity (Section 13.1).	Page heading, URL, listing summary, order.
University / Generic course	The two records this offering links.	Determines which university's course-list and comparison this offering appears under.
Campus (optional)	Which of the university's campuses this offering runs at.	Shown on the offering page.
Course level	e.g. Bachelor, Master.	Shown as a badge; used in filters.
Study mode	e.g. Full-time.	Shown as a badge; used in filters.
Duration min / max / unit	Programme length at this university specifically.	Offering page's facts panel.
Tuition min / max, currency, period	This offering's own tuition — the figure actually shown to a prospective student.	Offering page's facts panel and used in comparisons.
Application URL / Source URL	Where a student applies, and the verification reference.	Application URL becomes a live CTA link.
Media	Offering-specific image.	Offering page and listing cards.
Description	Overview text specific to this offering.	Main content area of the offering page.
Intakes (multi-select) + per-intake deadline	Which intake seasons this offering runs, each with its own optional deadline.	Shown in the offering's intake/deadline summary.
Academic and English-test requirements (repeatable: category, title, description, minimum score)	Offering-specific entry requirements.	Shown in the offering page's requirements section.
Featured Placement, Scheduled Publishing, SEO	Shared fieldsets. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = disappears from the university's course list and any comparison it was part of.

7 Scholarships

Public page family: `/scholarships` and each scholarship's own page.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name / Slug / Short summary / Display order	Core identity (Section 13.1).	Page heading, URL, listing summary, order.
Provider	The organisation offering the scholarship.	Shown as attribution on the scholarship page.
Benefit type	e.g. full tuition, partial, stipend.	Shown as a badge/label.
Amount / Currency	The scholarship's value.	Headline figure on listing cards and the scholarship page; used in the amount filter.
Deadline	Application closing date.	Shown prominently; can drive urgency messaging.
Application URL / Source URL	Where to apply, and the verification reference.	Application URL becomes a live CTA link.
Media	Listing/hero image.	Listing card and scholarship page.
Description / Eligibility	Overview and who qualifies.	Main content of the scholarship page.
Eligible countries / universities / offerings (multi-select)	Which records this scholarship applies to.	Drives cross-links from those countries/universities/offerings back to this scholarship, and the country/degree-level filters on the scholarships listing.
Featured Placement, Scheduled Publishing, SEO	Shared fieldsets. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

8 Consultants

Public page family: `/study-abroad-consultants` and each consultant's own page, plus consultant locations.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name / Slug / Short summary / Display order	Core identity (Section 13.1).	Page heading, URL, listing summary, order.
Email / Phone / Website URL	Contact details.	Shown on the consultant page.
Verification state: Unverified / Verified	Whether your team has checked this consultant — independent of Published.	Shown as a "Verified" badge; it is not a rating or score.
Source URL	Verification reference.	Not shown directly.
Media	Listing/hero image.	Listing card and consultant page.
Description	Overview text.	Main content of the consultant page.
Locations (multi-select)	Which physical consultant-location records this consultant is linked to.	Feeds the location filter on the consultants listing and location-specific pages.
Destination countries (multi-select)	Which study destinations this consultant specialises in.	Feeds the destination filter.
Services (tag list)	Free-form service tags.	Feeds the service filter and shown as badges.
Languages (tag list)	Languages spoken.	Feeds the language filter and shown as badges.
Featured Placement, Scheduled Publishing, SEO	Shared fieldsets. shared	See Section 13.
Publish / Unpublish	Controls visibility, independently of Verified.	Unpublished = entirely absent, whether or not verified.

9 Jobs (Careers)

Public page family: [/careers](#) and each job's own page.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Title / Slug / Short summary / Display order	Core identity (Section 13.1).	Page heading, URL, listing summary, order.
Department / Employment type	e.g. Marketing / Full-time.	Shown as badges; feed the department/type filters.
Location (free text) / City / State / Country (structured, optional)	Where the role is based — a plain-text label and, optionally, structured location links.	Location text shown on the listing; structured fields feed the location filter.
Remote status	e.g. remote, hybrid, on-site.	Shown as a badge; feeds the remote filter.
Published date / Expiry	When the listing went live and when it closes.	Expiry can drive the job disappearing from the active listing once past.
Application URL / email	How to apply.	Becomes a live CTA link or mailto link.
Description / Responsibilities / Qualifications	Full listing content.	Main content of the job page.
Featured Placement, Scheduled Publishing	Shared fieldsets. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

10 Events

Public page family: `/events` and each event's own page.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Title / Slug / Short summary / Display order	Core identity (Section 13.1).	Page heading, URL, listing summary, order.
Start / End date and time, Timezone	When the event runs.	Shown prominently; used to sort/filter upcoming vs. past events.
Event type: Offline / Online / Hybrid	Format.	Shown as a badge; feeds the mode filter.
Venue (free text) / City / State / Country (structured, optional)	Where it's held.	Venue text on the listing; structured fields feed the location filter.
Online URL / Registration URL	Join link and sign-up link.	Become live CTA links.
Media	Listing/hero image.	Listing card and event page.
Description	Full event details.	Main content of the event page.
Speakers (tag list)	Named speakers/presenters.	Shown on the event page.
Featured Placement, Scheduled Publishing	Shared fieldsets. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

11 Success Stories

Public page: </success-stories> .

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Title / Slug / Display order	Core identity (Section 13.1, no short-summary variant here).	Page heading, URL, listing order.
Display attribution	Who the story is credited to (e.g. student name/initials).	Shown alongside the story.
Country / University / University course offering (all optional)	Links the story to specific catalogue records.	Where linked, the story can appear as social proof on that country/university/offering's own page as well as the stories listing.
Media	Photo.	Shown with the story.
Journey content	The story's full text.	Main content shown on the stories listing/detail.
Scheduled Publishing	Shared fieldset. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

12 Testimonials

Public page: </testimonials>.

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Quote	The testimonial text itself.	Main content shown on the testimonials listing.
Display attribution	Who said it.	Shown alongside the quote.
University / University course offering (optional)	Links the testimonial to a specific record.	Can surface on that university/offering's own page as social proof.
Media	Optional photo.	Shown with the quote.
Display order	Manual ordering weight.	Order among testimonials shown.
Scheduled Publishing	Shared fieldset. shared	See Section 13.
Publish / Unpublish	Controls visibility.	Unpublished = entirely absent from the public site.

13 Shared fieldsets

These three fieldsets appear, verbatim, on most of the modules above. Documented once here rather than repeated ten times.

13.1 "Core" identity fields

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Name / Title	Display name (label depends on the module).	Page heading, listing cards, links.
Slug	URL segment.	Forms the public URL.
Short summary (where present)	A one-line summary.	Listing card text.
Display order	Manual ordering weight.	Position relative to sibling records.

13.2 Featured Placement & Scheduled Publishing

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Featured (checkbox)	Marks the record for prioritised placement.	Surfaces first in relevant featured sections — but only within the active window below.
Priority	Lower number shows first among featured records.	Tie-breaker ordering among featured items.
Featured from / until (both optional)	A time window during which "Featured" actually takes effect.	Outside this window (or if unchecked), the record shows in normal order — no need to remember to switch Featured off manually.
Publish from / until (both optional)	A time window during which the record is publicly visible at all.	Even while marked Published, the record is only visible inside this window; leaving both blank means no limit.

13.3 SEO fieldset

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
SEO title	Overrides the page's <code><title></code> tag.	What shows in a browser tab and search results, if set.
Meta description	Overrides the search-result snippet.	What search engines typically show as the page summary.
Canonical URL	Tells search engines which URL is authoritative for this content.	Prevents duplicate-content confusion; a warning shows if it points off-site unexpectedly.
Focus keyword	The primary term this page targets.	Editorial reference only — not rendered to visitors.

Open Graph title / description / image	How the page appears when shared on social platforms.	Social-share preview cards (Facebook, LinkedIn, etc.).
Twitter title / description	Twitter/X-specific share preview text.	Twitter/X share cards.
Allow search engines to index this page	Robots "index" directive.	Unchecked = search engines are asked not to list this page. Unpublished drafts are never indexable regardless of this setting.
Allow search engines to follow its links	Robots "follow" directive.	Unchecked = search engines are asked not to follow links from this page.

14 Operations

14.1 Bulk import / export Operations → Bulk data

FIELD / CONTROL	WHAT IT DOES	EFFECT ON PUBLIC SITE
Resource selector	Chooses which of the 13 bulk-eligible resources to work with.	Scopes every action below to that resource.
Download template (CSV / XLSX)	Gives a spreadsheet with the exact column headers that resource expects.	No effect until re-imported.
Dry run (validate only)	Checks a file against every validation rule without writing anything.	None — read-only. Reports exactly which rows would fail and why.
Import — create only	Adds new rows; rejects any row whose slug already exists.	New records appear publicly as soon as each is Published (import itself doesn't force-publish).
Import — create or update (upsert)	Adds new rows and updates existing ones matched by slug.	Same as above, plus existing public records reflect the updated data immediately if already published.
Bulk-update field + value + "Apply to selected"	Sets one field to one value across every selected record.	Applies to all selected records at once; publicly visible for any that are already published.
Bulk-archive	Archives every selected record.	Archived records disappear from the public site; blocked if another record still depends on one being archived (reported, not silently skipped).
Export (CSV / XLSX)	Downloads the resource's current data.	No public effect — read-only.

14.2 Redirects Operations → Redirects

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
From path / To path	An old URL and its replacement.	Visiting the old URL automatically forwards to the new one — useful whenever a page moves or a slug changes.

15 Settings

Seven groups on one screen. All of Section 1.2 (Global Header/Footer) is technically part of this screen too — repeated there because that's where an admin would naturally look for it.

15.1 General

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Site name	The platform's name.	Used in page titles and branding text site-wide.
Default locale	The site's primary language/region.	Affects date/number formatting site-wide.
Default timezone	e.g. Asia/Kolkata.	Governs how dates/times are interpreted where a specific timezone isn't set on a record.

15.2 Branding

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Logo	The site's logo image.	Shown in the header site-wide.
Favicon	Browser-tab icon.	Shown in the browser tab for every page.
Primary / Secondary brand colour	The site's accent colours.	Used across buttons and highlights site-wide.

15.3 Contact details

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Contact email / Support email / Support phone	Primary contact channels.	Shown on the Contact page and footer.
Counselling phone	A dedicated counselling contact number.	Shown alongside counselling CTAs.
Registered / business address	Legal address.	Shown in the footer/contact page.

15.4 Social links

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Facebook / Instagram / LinkedIn / X (Twitter) / YouTube	Social profile URLs.	Populate the footer's social-icon row.
WhatsApp / contact link (optional)	A direct chat/contact link.	Shown as a quick-contact option where enabled.

15.5 Header (see also Section 1.2)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Primary CTA label / destination	The header's main button.	Every public page's header.
Show the header CTA	On/off toggle.	Every public page's header.
Keep the header visible while scrolling	Sticky header on/off.	Every public page.
Announcement bar text / link / show toggle	An optional strip above the header.	Every public page.

15.6 Footer (see also Section 1.2)

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Footer description / Copyright text	Footer body copy.	Every public page's footer.
Show the contact column / counselling CTA / social links	Independent visibility toggles.	Every public page's footer.
Privacy policy URL / Terms URL	Legal links.	Every public page's footer; hidden if blank.
Account CTA label / destination	Reserved "Create account" link.	Hidden site-wide until a destination is set.

15.7 Default SEO

FIELD	WHAT IT DOES	EFFECT ON PUBLIC SITE
Default title suffix	Text appended to every page's <code><title></code> that hasn't set its own suffix.	e.g. "Diploma in Cybersecurity Universta" — the " Universta" part comes from here.
Default meta description	Fallback search-result snippet.	Used only where a page hasn't set its own — most pages do set their own, so this is a safety net.
Default Open Graph image / Default social share image	Fallback share-preview images.	Used where a page hasn't set its own.
Allow search engines to index by default	The default robots-index stance for new, never-saved pages.	A brand-new static page inherits this until an admin sets its own.

16 Access

Phase 1 ships one role — Super Admin — with a single seeded account; there is no separate Users/Roles screen yet, so every field below is about the login itself rather than permissions.

FIELD / BEHAVIOUR	WHAT IT DOES	EFFECT
Email / Password (sign in)	Authenticates the admin session.	A wrong password always shows a generic "invalid email or password" message — it never reveals whether the email exists.
Failed-attempt lockout	Repeated wrong passwords against one account temporarily lock it out.	After the threshold, the account is locked for a fixed cooldown, then unlocks automatically — no admin action needed.
Session	Kept while signed in; a missing/malformed/expired token is always rejected first, before any other check.	Logging out clears the session immediately.
